Exercise 7 – Project 3 Prototype

As an initial thought, my project will be a somewhat homage to the fictional universe of [SCP](#) (more specifically [SCP-1959](#)). The project will depict a cosmonaut floating in space as stars, planets and other celestial objects pass by. It will, at certain intervals, move about as described in the case file. By hovering the mouse over the cosmonaut, a simplified description of the entity will appear. By clicking on the cosmonaut, a shuttle will pass by it in the background. Classes will be separated amongst the objects flying past the cosmonaut. Arrays will be designated to the different movements the cosmonaut makes. Every time the entity is clicked, the type of movement will change. A sci-fi themed tune will be played on loop for ominous effect.
